

Contents

1	Introduction	3	
1.1	Geometry of the muon system	4	
2	Description of the global alignment algorithm	6	
2.1	Alignment datasets and track-fitting procedures	8	
2.2	Calculation of super-residuals	9	
2.3	Fitting the super-residuals distribution	11	
2.4	Determining alignment parameters from fits	13	(DONE)
2.5	Accommodating errors in magnetic field and material budget	17	
3	Monitoring Tools and Validation/ Verification	21	
3.1	Comparison of geometries in the database	22	
3.2	Validating residuals fits	22	
3.3	Muon system maps	23	
3.4	Verification with relative residuals	26	
4	Global alignment results with collisions Monte Carlo	28	
4.1	Scaling with statistics	28	
4.2	Dependence on tracker misalignment	28	
4.3	Dependence on magnetic field errors	28	
5	Global alignment results with cosmic ray data	28	
5.1	Validation plots	28	
5.2	Verification with relative residuals	28	
5.3	Verification with stand-alone muon alignments	28	
5.4	Verification with cosmic track splitting	28	
6	Relative alignment of CSCs with local tracks	28	
6.1	Description of the CSC Overlaps algorithm	29	
6.2	Local CSC alignment parameters	31	
6.3	Specialized trigger and data streams	32	(DONE)
6.4	Results from the 2008 LHC run	33	
6.5	Extension to align CSC layers	36	
6.6	Verifying the global procedure with local alignment	37	
7	Alignment outlook for 2009–2010	39
